NEW DATA ITEMS

This February data cut contains Capital IQ Compustat's new content to accommodate changes in reporting for FASB 160 and IAS 27. Some Balance Sheet and Income Statement items related to Minority Interest are renamed, and new items are added.

From Capital IQ Compustat's letter sent to subscribers in January:

"FASB 160 aligns the reporting of Noncontrolling Interests in subsidiaries with the requirements in IAS 27. Previously, entities applying international financial reporting standards (IFRS) reported Noncontrolling Interests as equity, while entities applying U.S. generally accepted accounting principles (GAAP) reported those interests as liabilities or in the mezzanine section between liabilities and equity. Different adoption timeframes exist for U.S., Canadian and International companies. Any calculations that are currently using MIB and MIBQ by your firm should be reviewed to determine whether or not those calculations should change. A number of data items will also undergo name changes and a complete list will be available on the Compustat Resources site - the Beta Resources section."

The following tables include the item name changes and the new data items with their keysets. Two new keysets are also introduced in the CCM database in order to support these new items.

NORTH AMERICAN BALANCE SHEET BALANCING MODEL

The North American Balance Sheet balancing model is changed as a result of the extensive data changes. The mnemonic, MIB Formerly Minority Interest (Balance Sheet), is redefined as Noncontrolling Interest - Redeemable. MIBN (Noncontrolling Interest - Nonredeemable) is new and added to the balancing model. In order for the balance sheet to balance, MIBN should be added to your data repository.

NEW INDEX FLAG NOT AVAILABLE

A new item indicating Index Active or Inactive status, mnemonic, IDXSTAT, will not be available in the CCM database until the next CRSPSift/CRSP Utilities and Libraries release. For now, to determine active or inactive status or an index, CRSP recommends that subscribers use available index level series, check the effective data ranges, or continue using whatever method you have used up to this point.
